

Raytheon Warfighter Protection Center

Cummings Research Park - Huntsville, Alabama

portfolio

In cooperation with Fuqua & Partners architects , 4Site provided site design and construction administration for the new Raytheon Warfighter Protection Center located in Huntsville, Alabama's Cummings Research Park. 4Site was particularly drawn to the project after learning of the clients interest in pursuing Leadership in Energy and Environmental Design, or LEED certification.

Since its completion, the project has been awarded the prestigious LEED Silver Certification by the non-profit U.S. Green Building Council. In order to obtain the Silver certification, the Raytheon facility had to earn points using the council's stringent criteria, which included reducing operating costs, providing a healthier and more productive environment for occupants, and conserving natural resources. 4Site was pleased to have participated in a design process that allowed this project to become the first official "green" facility in the state of Alabama under the newer, more stringent standards set by the LEED program.

An Interdisciplinary Approach to Land Planning & Design
